

From the Principal's Desk

As 'REASON' enters its 5th year of publication, it is time to look back and reminisce.

Kalyani Govt. Engineering College, which started its journey only in August 1995, was still a toddler when the first issue of 'Reason' saw the light of the day in 1999. Much water has flown down the Ganges since then. To-day, the name of the college is something to reckon with in the higher technical education canvas of the State. The college has laid a rock solid foundation with top grade infrastructural facilities developed in all the disciplines that are run. Aside from imparting quality technical education in four undergraduate engineering disciplines (Computer Science and Engineering, Electronics and Communication Engineering, Mechanical Engineering and Information Technology), it has started two postgraduate engineering disciplines in Production Engineering and Computer Science and Engineering besides running a regular postgraduate course in Master of Computer Application. If everything goes well, the college is all set to start its 5th undergraduate engineering discipline in Electrical Engineering and 3rd postgraduate engineering discipline in Electronics and Communication Engineering from the academic session of 2005-06.

It shall be no travesty of truth to say that a sense of optimism and quiet confidence has pervaded the atmosphere of the college all through. This has been further accentuated by the recent inclusion of the college in the Technical Education Quality Improvement Programme (TEQIP) of Government of India, through which a substantial amount of development fund shall flow to the college in the coming 3-4 years. This will surely push the academic standing of the college a few more notches up.

In consonance with the all round development of the college, its technical magazine 'Reason' too has grown in both quality and volume. Under the stewardship of two relatively young editors, 'Reason' has worn a new outfit this year. This is evident in the pages to follow which are replete with technical articles of merit written mostly on topics delving into the frontier areas of technology. The emphasis all along has been on quality while meticulous planning and careful attention for the details have remained the hallmark of the work of the editorial board.

'Reason', as we said earlier, is the announcement of our progress and we proudly pass on this creation to all who evince keen interest in tracking the scientific and technological developments of man.
